

CARDIOLOGY CONSULT NOTE

Cardiology Service - Inpatient Consult

Patient: Marcus Webb MRN: 100847

REASON FOR CONSULT

Evaluate troponin elevation in setting of sepsis.

ASSESSMENT

62-year-old man with sepsis and modest troponin rise, likely demand ischemia rather than primary ACS. No dynamic ECG changes. Continue source control and aggressive resuscitation. Will follow with serial troponins and recheck ECG in 6 hours.

RECOMMENDATIONS

1. Trend troponins q6h x 3.
2. Continue aspirin 81 mg daily.
3. No indication for cath at this time.
